

title: Send parsed logs to stdout description: log shipper, stdout, unix pipe, parse logs

Output Plugin: Standard output (stdout)

This plugin writes the result of Logagent parser to the standard output stream (stdout) and is activated by default.

Following message formats are supported:

- Line delimited JSON (default)
- Pretty JSON (`-pretty` command line flag)
- YAML (`-yaml` command-line flag)

Configuration

```
input:
  stdin: true
  files:
    - /var/log/**/*.*log

output:
  stdout: yaml
  # use 'pretty' for pretty json and 'ldjson' for line delimited json
  # stdout: pretty
  # stdout: ldjson
```

Start logagent

```
logagent --config stdout.yaml
```

Command-line usage

```
cat test.log | logagent --yaml
cat test.log | logagent --pretty
cat test.log | logagent --ldjson
```
