

title: Supported Technologies description: Sematext APM platform provides Java applications distributed tracing support for automatically tracing requests to web servers such as Tomcat and Jetty as well as technologies like Spring Boot, Elasticsearch TransportClient and more

Currently, only Java applications can be traced. The agent is compiled with Java 1.6 target, so applications using Java 1.6 and up are supported.

Application servers:

- Apache Tomcat - 6.0.x, 7.0.x, 8.0.x
- Jetty - 7.x, 8.x, 9.x
- Generic servlet container (without cross-application tracing support)

Technologies:

- Generic JDBC driver support
- JPA
- Spring
- Elasticsearch TransportClient
- java.net.URL
- Apache HttpClient 3.x, 4.x
- JAX-RS

Support for tracing your own JVM applications and other JVM-based technologies can be added via Custom Pointcuts.
