

title: Sematext Core Container Monitoring description: Monitor Docker, rkt and containerd containers with Sematext by installing simple Docker Certified Agents and using our interface that shows everything in one simple screen.

Monitor Docker, rkt and containerd containers with Sematext by installing simple Docker Certified Agents and using our interface that shows everything in one simple screen.

## **Create a Sematext Monitoring App**

Creating a Sematext Monitoring App is as easy as choosing the Docker integration and giving the App a name.

## **Install the Sematext Agent**

Sematext can easily monitor your containers with the Sematext Agent. Installing the Agent is as simple as running one command on each host.

- Docker
- Docker Compose
- Docker Swarm

## **See Container data in Sematext Monitoring**

Sematext Agent collects a plethora of metrics about hosts (CPU, memory, disk, network, processes), containers (Docker, rkt, containerd) and orchestrator platforms and ships that to Sematext Cloud.

You can see host and container metrics inside the newly created Docker App or have a high-level overview of all your containers in the Sematext Containers screen.

Check out the Sematext Agent installation for Docker guide for more info.
