

title: Sematext App Access description: App Sharing is restricted only to a particular app. Nothing besides the shared app is accessible to the invited user for example, dashboards are at the account level can thus be shared only through Account Sharing.

App access is **restricted only to a particular App**. Nothing besides the shared App is accessible to the invited user.

***Note:** Dashboards are at the account level can thus be shared only through Account Access.*

This option is useful if you want to be restrictive about which Apps can be seen by others or what kind of effect they have on your team.

By only configuring App access, guests **can't see or edit alert rules** created by your team, they **can't use your team's notification hooks**, meaning they're **limited only to the App they have access to**.

To share one of your Apps with other users, go to the App access page on Sematext Cloud.
