title: Fields description: Sematext's Logs management App looks for special fields in logs, namely host, source, facility, severity, syslog-tag, tags, message, and @timestamp

Tags from the Common Schema apply to Sematext Logs as well. Additionally, there are Logs-specific fields which also get special treatment:

- host
- source
- facility
- severity
- syslog-tag
- tags
- message
- @timestamp

To read more, check out our Common Schema for Logs Tags.
